

# Vienna Enterprise

Vienna Enterprise is designed for larger organisation or for those looking to maximise their investment in Vienna.

Vienna Enterprise leverages existing Microsoft Technologies to enhance the Vienna Product Platform. Vienna Server is integrated with SQL Server and Microsoft SharePoint Server to enable you to backup, replicate and operationally control your server within your existing operations schedules and plans.

By integrating with SharePoint Server you can customise a Vienna SharePoint Site and select the KPI's you need to see for your teams SharePoint Site. Whether it be defect information, test execution levels, team discussions or otherwise.

## Vienna Enterprise Edition Architecture
